

FOR IMMEDIATE RELEASE:

Hackers upgrade to a larger home in Watertown, Connecticut

Watertown, Connecticut – August 16, 2011 – **CT Hackerspace**, local group of technology enthusiasts, have set their sights on opening their doors in a new 4,000-plus square foot space located within a local warehouse in Watertown, CT.

A hackerspace is an open community lab, workshop and / or studio where people of diverse backgrounds can come together to share resources and knowledge to create and invent all types of things.

Bill Saturno, president of **CT Hackerspace**, commented “We have high hopes moving forward and growing even more. We truly thank our friends at the Freight Street Art Gallery in Waterbury who provided us with our inaugural space to launch CT Hackerspace, but our growth put our current space bursting at the seams. I’m hoping our bigger location will help us continue to grow, and be even more involved with the community. We welcome new people to stop by, visit, and learn more about CT Hackerspace - Even attend a meeting or two to see if it’s a fit for you.”

Upcoming plans to include talks and seminars for the public, as well building innovative group projects. The current **CT Hackerspace** group project is building a computer controlled rapid prototyping machine called a “RepRap”, which creates any object in 3D using plastics. This project was recently showcased at a general meeting of the Danbury Area Computer Society (DACS).

CT Hackerspace is moving in to their new space at 30 Echo Lake Road in Watertown, and will be announcing an official open house in September.. In the interim, those interested in learning more about the project are encouraged to contact the group. They hope that their space and activities will benefit the community and be a source of inspiration for those seeking to meet and work with like-minded creative people.
